

Dear Readers,

a turbulent year is drawing to a close. We have overcome the major constraints with Covid-19, and the economy is developing again.

This year, we celebrate our 60th anniversary and look back on decades of experience with products and services for safeguarding road construction sites. Our pioneering company, which developed the first radio-controlled construction site traffic lights, is now a leading specialist provider of traffic management in Germany and Europe.

With the merger of the companies AVS, Chevron, Fero, HRS and Ramudden, we form the basis to be a leading provider of road safety services to offer our customers innovative products and services with combined strength, to advance digitalization and to secure Europe's roads sustainably.

We wish you and your families only the best for the New Year!

With my best wishes

Dieter Berghaus, Advisory Board Member

A unique experience: the service and product worlds of AVS and Berghaus can now be experienced in a virtual showroom and with a live drive through a highway construction site - without road noise and risk, conveniently on a PC or mobile device.

## AVS Group Germany

With new locations in Dortmund, Bayreuth and Mannheim, we have again steadily expanded our nationwide network for traffic safety in urban areas and on the highway this year and added solutions for mobile traffic technology with the founding of AVS Digital GmbH in Senden.

## AVS Group International

Internationally, the AVS Group offers a comprehensive network of services through the merger with the leading providers of traffic safety services in the area of traffic and other critical infrastructure from the UK (Chevron and HRS), Belgium (Fero Group) and the Nordic countries (Ramudden). Local expertise, bundling of strengths in digitalization and sustainability (ESG), and over 3,000 experienced employees set the course for further diversification and international growth.

## Sustainability at AVS

### BAUM Membership

AVS wants to safeguard Europe's road construction sites sustainably. That is why we have decided to partner with the Federal Working Group for Environmentally Conscious Management, B.A.U.M. e.V.. [www.baumev.de](http://www.baumev.de)

### Eco-friendly fleet

AVS relies on climate-neutral leasing contracts for its fleet. Our new „Twister“ uses state-of-the-art high-pressure water technology to remove road markings in an environmentally friendly manner and without leaving any residue.

### Work safety

To protect our employees, we invested in new, state-of-the-art protective equipment and expanded our online training program to include additional training modules.

**Sustainability for us at AVS means future viability.**

H. Hucke  
CEO

A. Schwingeler  
COO Germany

D. Schönauer  
COO International

»We in the AVS Group have consciously decided on a sustainable corporate orientation. Our goal is to make Europe's roads safer in the long term, both today and tomorrow. In order to actively master the challenges of the future, we see ourselves as a strong driver of innovative solutions that ensure competitiveness, sustainable mobility and a future worth living.«
